Freiburg’s road to sustainability is efficient, innovative, economically successful, environmentally exemplary, and socially equitable. Values such as sustainability and momentum, tradition and future viability, scientific excellence, quality of life, and a lighthearted way of living all come together in the service of one common aim: the Green City. As an exemplary Green City, Freiburg has become a successful role model for Germany and Europe. Few other locations can boast a greater range of model projects or more “green” expertise. Freiburg has become a workplace for pioneers with projects recognised across the globe. Over 25,000 experts from around the world come to Freiburg to experience this spirit of innovation.
The bike station offers users excellent services and an ideal transit for long-distance public transport services with options to travel by foot, bike, and car sharing.

The bike station offers more than just an attractive, environmental-friendly alternative. The FR2 Bicycle-Priority Route is being developed along the railway line used to transport goods. For many cyclists, the Dreisam is a bicycle-priority route. FR2 Bicycle-Priority Route

The Dreisam Renaturation Sand有些人
Sandweg, Dreieich

Access

Train line 1, “Erdol-Güterbahnhof” stop. The Dreisam Renaturation Sandweg project aims to transform the Dreisam into a public park with a “willow motif”. This project is funded by residents without cars, making it a green area in the city center that doubles as a public park.

The Dreisam Renaturation Sandweg project aims to transform the Dreisam into a public park with a “willow motif”. This project is funded by residents without cars, making it a green area in the city center that doubles as a public park.
